A variety of MEM devices have been proposed and, in many cases, have been fabricated. For example, a wide variety of movable mechanical structures have been proposed, including micromirrors and microlenses. Such MEM devices have been considered for a wide variety of applications, including optical devices, such as switching devices, and optical computing devices. The ability to use MEM devices in such applications is limited, however, by the inability to properly provide electrostatic biasing to such devices. The present invention provides an apparatus for overcoming this problem, and is therefore of great utility in the fabrication of MEM devices. In accordance with the present invention, a micro electromechanical (MEM) structure, such as a micro mirror, is placed under the control of a predetermined electrostatic biasing field to which the MEM structure is responsive. The MEM structure is coupled to an actuator which, in turn, is controlled by another predetermined electrostatic biasing field which is applied to the actuator to move the

I have a query that has a few tables in it. I'm trying to find the fastest and simplest way to export this into a SQL Server. I don't have any experience in SQL so I'm really lost and frustrated. I have found this: Is this the best way? I'm running into some issues. I tried running the query in MS Access directly, but I keep getting an error about a missing'sheet' argument. When I try to use SQL Server Management Studio, I get some errors because it doesn't recognize my parameters. Any ideas on how to get these tables exported quickly, easily, and with the least amount of complications? UPDATE: After a few days I came to the conclusion that this is going 2d92ce491b
