15 Installation Manual Urmet Domus

Comunica queste...4. Select a database to connect to On the Linux server, create a new database user with the following command: `sudo -u postgres createuser -D newuser` where: newuser is the new database user name
Note: the root user does not have to have a password, so password information is not included in the command below. On the Windows server, create a new database user with the following command: `psql.exe -h localhost -U newuser -d databasename` where: newuser is the new database user name databasename is the name of the database on the Linux server 5. Confirm the user account Once the new user is created, log in as the new user on the Linux server and check the new user's password by running the following command: `sudo -u postgres psql newuser -c "show current user"` On the Windows server, log in as the new user: `psql.exe -h localhost -U newuser -d databasename` where: newuser is the new database user name databasename is the name of the database on the Linux server 6. Confirm the database database administrator role To confirm that the new user has been granted a database role, run the following command on the Linux server: `sudo -u postgres psql newuser -c "alter role databasename with grant admin on database databasename;"` On the Windows server, run the following command: `psql.exe -h localhost -U newuser -d databasename` where: newuser is the new database user name databasename is the name of the database on the Linux server 7. Connect to the database Once the new user has been granted access to the database, the new user can connect to the database with the following command on the Linux server: `sudo -u postgres psql -h localhost databasename` On the Windows server, connect to the database with the following command: `psql.exe -h localhost -U newuser -d databasename` where: newuser is the new database user name 3e33713323
