Design AutoCAD lets users create graphics, draft designs, models, and geometry by drawing a series of "objects." Each object can have its own type of shape, behavior, or attributes such as thickness, color, and linetype. Objects are stored in memory or on the hard drive. Depending on their characteristics, objects can be represented as symbols, lines, curves, surfaces, solids, 2D images, and 3D elements. Once defined, objects can be combined to make a drawing. Objects can be linked to external data such as a vector image, a spreadsheet, or a word document. Drawing objects are given a name and selected by the user with a click of the mouse. A separate menu allows for the creation, positioning, and manipulation of text, lines, dimensions, solids, and surfaces. Internals AutoCAD works by creating and using a computer file. When a new drawing is created, a drawing file is created in a temporary location on the hard drive. In AutoCAD, the user draws objects on the screen, and then clicks on an Undo button (Ctrl-Z), which immediately updates the drawing and eliminates the temporary file. (Undoing is similar to the undo functionality in other graphics editors.) If the user decides to perform a second undo, a second file is created and is linked to the first. As the user creates and manipulates drawings, new files are created as needed. However, a recent change a1d647c40b
